| 2. RELIABILITY AND STABILITY |      |      |      |      |  |
| 2.1. Logging                 | <br> | <br> | <br> | <br> |  |
| 3. PERFORMANCE               | <br> | <br> | <br> | <br> |  |
| 4. SCALABILITY               | <br> | <br> | <br> | <br> |  |
| 4.1. Feature scalabilty      | <br> | <br> | <br> | <br> |  |

# **REQUIREMENTS**

### 1. STACK

The demo must have the following Stack components

### 1.1. Apache Spark

The Apache Spark engine must be installed, configurable and fully operational.

### 1.2. Scala

The Scala run-time must be installed and fully operational.

The main logic of the demo app must be implemented with the Scala language.

# 1.3. Python

The demo must have a small bunch of Python code.

# 2. RELIABILITY AND STABILITY

# 2.1. Logging

The console app should demonstrate proper logging to STDOUT and file

# 3. PERFORMANCE

### 4. SCALABILITY

# 4.1. Feature scalabilty

The app should be written so that new features could be added easily.
